

SAJJAD MOHAMMADI NEJAD

Senior Back-End Developer

+98 917 380 1153

daram3118@gmail.com

<https://github.com/sajadweb/>

Tehran

Skills

Backend: Node.js, NestJS, GoLang, Redis, gRPC, RabbitMQ, RESTful API, GraphQL, Web3, Smart Contracts, NFTs, MetaMask, OpenSea, Ollama, OpenAI API, Swagger

Frontend: React, Redux, Javascript (ES6), TypeScript, HTML5, CSS3, SASS, Bootstrap, material-ui, SPA, Responsive Design, Web3.js,

Databases: PostgreSQL, MongoDB, MySQL, MS SQL Server

DevOps & CI/CD: Docker, GitHub Actions, GitLab CI, n8n (custom automation), CI/CD pipelines

Testing: Jest, React Testing Library, TDD (Test-Driven Development)

Version Control: Git, GitHub

Tools & IDEs: GitHub Copilot, Codeium, Cursor, Postman, Visual Studio Code

Documentation & Diagrams: Swagger, Markdown, UML, Sequence Diagrams

Architecture: Monolithic, Microservices, Saga Design Pattern,...

Other: Forex, Web3, Blockchain, Performance Optimization, Code Review

INTRODUCTION

Senior Backend Developer with over 15 years of experience in building robust, scalable backend systems using technologies like Node.js, NestJS, Go (Gin,..). Skilled in both SQL and NoSQL databases, performance optimization with Redis, and modern inter-service communication using RabbitMQ and gRPC. Adept in CI/CD pipelines, Docker, GitHub Actions, and Test-Driven Development (TDD). Experienced with blockchain technologies including Web3, Smart Contracts, NFTs, MetaMask, and AI integrations such as Ollama and OpenAI API. Brings a deep understanding of system architecture (monolithic and microservices), excellent analytical thinking, and a strong commitment to clean, efficient, and well-documented code. Passionate team player with strong communication and estimation skills, currently expanding expertise in Golang and AI-powered development.

PROFESSIONAL EXPERIENCE

1. Freelance Developer — AI, Trading Automation & Bots

2023 – Present — Tehran, Iran (Remote)

Worked as an independent developer delivering end-to-end solutions in the fields of Forex trading

automation, AI assistants, and business process automation. Built scalable systems using Go, NestJS, and Python for international clients.

1: Telegram-based Forex Trading Bots

Role: Backend Developer & System Designer

Developed intelligent Telegram bots for executing and mirroring trades across client accounts. Enabled secure login via investor password (without `.mq1` files), similar to aceofdroids.com.

Responsibilities:

- Designed and deployed trading automation engines
- Enabled multi-account client trade replication
- Built Telegram integrations for trade execution and notifications

Stack: Go, Python, Telegram API

2: Restaurant Demand Forecasting System

Role: Backend & AI Developer

Created an automation system to forecast the next day's ingredient needs based on previous sales and purchases.

Responsibilities:

- Designed a rule-based and ML-enhanced forecasting engine
- Integrated with existing order systems and dashboards

Stack: Python, NestJS, Pandas, PostgreSQL, REST APIs

3: Smart Medical Assistant

Role: AI Assistant Engineer

Built an AI-powered chatbot to assist users in diagnosing symptoms, suggesting further investigation, and offering care recommendations.

Responsibilities:

- Developed decision-tree + LLM-based backend
- Implemented role-based flows for patients and operators

Stack: Python, Ollama, NestJS, Redis, PostgreSQL

2. Full Stack Developer studioimmigrato.com

2024 (Freelance, Remote-Italy)

Project: Immigration Platform

As a smart platform, Immigration helps users who intend to migrate to Italy by automating complex paperwork and directly connecting them with verified immigration lawyers. The platform simplifies the legal process and reduces cost and time for clients by digitizing all bureaucratic steps.

Responsibilities:

- Designed and implemented core features of the document automation system using NestJS, Node.js, MongoDB, and Redis in a microservice architecture.
- Developed responsive and interactive UI with React, TypeScript, and S3 for file storage.
- Integrated Google Calendar API for appointment scheduling between clients and immigration attorneys.
- Built SharePoint API integration to manage and share legal documents securely.

- Applied Saga Design Pattern to handle complex workflows such as form submission, translation, and lawyer assignment in a distributed environment.
- Improved user experience by minimizing manual steps and reducing processing errors, leading to a 50% reduction in case processing time.
- Maintained clean code practices and ensured smooth deployment through CI/CD pipelines.
- Implemented Stripe for payments.

3. Full Stack Developer logispress.com

2024 (Freelance, Remote-Italy)

Project: Logispress

Logispress is a smart logistics platform that helps **Shopify** store owners automate inventory management and order fulfillment. With seamless Shopify integration, store owners can focus on growing their business while the system automatically tracks stock and handles shipping logistics.

Responsibilities:

- Integrated **Shopify API** to enable product sync and automate store connections.
- Developed real-time inventory deduction and automatic order processing using **NestJS**, **Node.js**, **Redis**, **MySQL**, and **S3** in a **microservice** architecture.
- Created an admin dashboard and client portal using **React** and **TypeScript**, ensuring responsive UI and high performance.
- Implemented **Meilisearch** for fast and efficient product search and indexing.
- Utilized **Saga Design Pattern** to manage distributed workflows like inventory update, product sync, and shipping status.
- Ensured real-time, bug-free synchronization between Shopify and Logispress using Webhooks and robust error-handling logic.
- Reduced logistics management time by up to **70%** for dozens of online stores across Italy.
- Implemented Stripe for payments.

4. Senior Backend Developer [Buluro](https://buluro.com)

2023-2024(Freelance, Remote-Turkey)

Project: **Buluro**

[App Store](https://buluro.com)

Buluro is a comprehensive platform that connects professionals and businesses in the industrial sector. It provides smart access to business data, expert workforce, raw materials, events, and other industry needs through modern cloud-based solutions.

Responsibilities:

- Joined as a **senior backend developer** to improve system performance, refactor complex queries, and enhance overall documentation and security.

- Audited and optimized database queries and indexing for **PostgreSQL**.
- Identified and resolved critical **security vulnerabilities** and implemented best practices.
- Designed and maintained distributed **microservice architecture** using **NestJS** and **RabbitMQ**.
- Implemented **Saga Pattern** for managing distributed transactions across services.
- Built scalable **GraphQL** and RESTful APIs with advanced validation and role-based access control.
- Performed **system monitoring and performance analysis** using **Google Cloud tools** (e.g., Cloud Monitoring, Logging, Tracing).
- Collaborated with team members to document architecture, APIs, and operational workflows.

5. Full Stack Developer @Pheromone Inc

Jan 2022 – 2023 (Remote – Canada)

Worked as a **Full Stack Developer** on multiple web3 and SaaS projects, focusing on backend architecture, API integrations, and third-party service challenges.

1. NFTUL – NFT Trading Dashboard

A web3 platform that provides NFT analytics, wallet tracking, and performance insights.

Challenge: Integrate multiple third-party services like **Binance**, **OpenSea**, and **wallet tracking systems** to monitor NFT movements across wallets.

Key Features:

- Created an **NFT Explorer** to monitor NFT ownership and transaction history.
- Integrated **OpenSea API**, **Algolia API**, and **Socket.io** for real-time updates.
- Implemented **P&L (Profit & Loss) reporting system** with historical price estimation.
- Built using **NestJS**, **RabbitMQ**, **MongoDB**, **Elastic search**, **Google Cloud**, and **GraphQL**.
- Containerized services using **Docker** and deployed via **GCP**.

6. Chief Technology Officer (CTO) [CRM Sakok](#)

2020 – 2022 — Shiraz, Iran

Led both **frontend and backend development teams** at **CRM Sakok**, a modern **cloud-based CRM platform** built to unify business operations, eliminate fragmented systems, and improve overall organizational efficiency.

About Sakok CRM:

Developed by *Abr Tejarat Hoshmand*, Sakok CRM has over 10 years of experience in business management systems and serves **1000+ trusted businesses** across Iran. It helps reduce labor-management issues and boost business productivity.

Key Responsibilities & Achievements:

- Supervised and guided **frontend (React.js + Ant Design)** and **backend (NestJS + Node.js)** teams through the full software development lifecycle.
- Designed and implemented a **modular microservices architecture** for scalability and flexibility.
- Established **versioning workflows** using Git branches, NPM private modules, and semantic release strategies.
- Architected and maintained **CI/CD pipelines** with Docker to automate testing and deployment.
- Integrated **Firebase Cloud Messaging (FCM)** for real-time user notifications.
- Facilitated team collaboration using tools like Swagger, sequence diagrams, and Git.
- Advocated for **clean UI/UX** based on modern design trends for maximum usability during long business hours.

7. Technical Manager @ RadHoosh / Radco

Jan 2016 – Jan 2020 — Shiraz, Iran (Remote for Australia)

Worked as **Technical Manager and Fullstack Developer** at **RadHoosh**, the Iranian technical arm of an Australian-based software company. Led and contributed to multiple enterprise-grade, multi-national projects using microservices architecture and cloud-native technologies.

8. Gerayesh Hamrah ([Tosan Techno Holding](#))

Position: Backend Developer → Backend Team Lead

Duration: 2012-2016

Location: Tehran, Iran

Link: [24ipay](#)

As one of the initial idea contributors and core backend engineers, I played a pivotal role in launching Iran's **first mobile payment service—24iPay**—under Tosan Techno Holding. This project was unveiled at **Elecomp Exhibition** in collaboration with **Saman Electronic Payment Company**.

Technologies

- **Backend:** PHP (Laravel), Node.js (Socket.io)
- **Frontend:** Vue.js, HTML/CSS/JS
- **Realtime:** Node.js + Socket.io for communication between drivers and users
- **Security:** Nginx, SSL, full data encryption (both in transit and at rest)

Tools and Services

- Google Maps for precise geolocation
- Firebase Cloud Messaging (FCM) for real-time notifications
- Load balancing and security layers using **Nginx**

Security Focus

- All sensitive user data stored encrypted in the database
- End-to-end encrypted communication between driver and passenger
- Load-balanced architecture for scalability and performance

EDUCATION

- **Master of computer software Engineering**
 - Azad University of Fars– Iran
- **Bachelor of It Engineering**
 - Pumnoor University, Fars– Iran
